Professional Summary

Mechatronics Engineering graduate with hands-on experience in frontend development. Skilled in building responsive, modern web applications with a strong focus on performance, accessibility, and user experience. Proficient in translating designs into clean, scalable code and integrating frontend interfaces with intelligent systems and APIs. Passionate about creating intuitive digital products and seeking opportunities as a frontend developer.

Education

-
- Bachelor of Engineering (B.Eng) in Mechatronics Engineering, Mechatronics**
Bowen University, Iwo, Osun State, Nigeria Nov. 2020 – Jun. 2025
 - High School Diploma (WASSCE)** Sep. 2014 – Jun. 2020
All Saints' College, Ibadan, Nigeria

Work Experience

-
- Research Assistant, Institute of Agricultural Research and Training, Nigeria** Feb. 2023 – Aug. 2023
- Conducted engineering research for agricultural applications
 - developed a prototype smart irrigation system
 - assisted with prototyping and testing
 - Maintained accurate records of experiments and technical reports
- Intern, Transmission Company of Nigeria, Ibadan** (Electrical, Protection Control and Metering, Control departments) Mar. 2024 – Aug. 2024
- Assisted in maintenance of electrical equipment and machinery.
 - Monitored and recorded transformer readings.
 - Supported routine inspections and safety checks

Graduate Internship, SmartTeller Hub, Oke-Ilewo, Abeokuta, Ogun State (Frontend developer)

Nov. 2025 – Oct. 2026

- Designed the UI and UX of GuichetGPT, an AI-powered website that allows users to apply easily for visa applications and document preparation with AI chatbox that allows users get instant answers to complex immigration questions.

Projects

- **Colour-Sorting Machine**

An automotive color identification system that also sorts different materials based on their colors

- **Portfolio Website**

Designed a clean and functional website using HTML, CSS, and JavaScript animations.
jaycportfolio.netlify.app

- **Solar Panel Installation**

The project involved mounting racking, attaching panels, wiring them to an inverter and batteries, connecting them to my school's engineering laboratory.

- **Automated Waste Management System**

Built a sensor-driven, electromechanical bin featuring an infrared proximity detector, microcontroller logic, and servo-actuated lid.

- **Automotive Circuit Trainer (AECT)**

Assembled and tested electrical circuit trainer for practical demonstrations. The AECT is the practical teaching/training device that illustrates the basic and advanced electrical circuitry used in modern automobiles.

- **Automotive Circuit Trainer (AECT) Interface**

The Automotive Electric Circuit Trainer (AECT) is an interactive simulation platform designed to teach automotive electrical systems. It also allows users interact with the AECT from the users' phone with ease.

Skills

- **Engineering Laboratory Skills:** Problem-solving, troubleshooting, teamwork and technical communication
- **Programming:** HTML5, CSS, JavaScript, React.js, Python, Tailwind and Bootstrap
- **Embedded and Robotics:** Microcontrollers, sensors, actuators and control systems
- **CAD and Prototyping:** SolidWorks, basic prototyping techniques
- **Languages:** English and Yoruba
- **Others:** Report writing, documentation, time management, critical thinking and effective communication

Leadership Experience

Sport coordinator, Bowen Association of Engineering Students: Organized and managed a 25-member student team.
